The Arc of Monroe provides Behavior Management Service to parents and guardians supporting a person with I/DD in their home.

The Behavior Intervention Specialist provides a Functional Behavioral Assessment, Behavior Support Plan, and in-home behavior support, guidance and training.

The Behavior Intervention Specialist visits the home to evaluate the person and develop a support plan. Then, they teach the family effective tools and guide them on ways to help their loved one be as successful as possible. The plan includes, but is not limited to the following:

- Strategies for non-restrictive behavior management
- Identification of triggers and environmental supports
- Recommendations for additional services when appropriate

Needs are met as required and as long as necessary. This may be two visits to the home or on an ongoing basis until the behavioral need is resolved.
